Contract requests for red pandas

Contents

Red Pandas

A page about red pandas

Red pandas are excellent climbers, and forage largely in trees. They eat mostly bamboo, and may eat small mammals, birds, eggs, flowers, and berries.

In captivity, they were observed to eat birds, flowers, maple and mulberry leaves, and bark and fruits of maple, beech, and mulberry.

The primary threats to red pandas are direct harvest from the wild, live or dead, competition with domestic livestock resulting in habitat degradation, and deforestation resulting in habitat loss or fragmentation.

Submitting a contract request

Once you have selected the correct Contract Request type, you will want to fill out the correct sections for your request.

This is how you submit a contract request.

To submit the request:

1. When you've completed your request, click **Save**.
2. Review your contract request.
3. To make further edits, click **Edit**
